

IF IMITATION IS THE SINCEREST FORM OF FLATTERY, WE'D LIKE TO THANK OUR COMPETITORS.

iLevel® Trus Joist® Silent Floor® Joists

When we invented the wooden I-joist, we revolutionized the world of floor framing. The Trus Joist Silent Floor joist set a new standard, and it's still the industry's star performer. Apparently our competitors think so too—judging by the number of imitators out there.

Silent Floor joists—also known as TJI® joists—are lightweight, easy to work with, and deliver unmatched dimensional stability and performance. They're engineered to resist the bowing, twisting, and shrinking that can lead to squeaky or “soft” floors, helping reduce callbacks after the floor is finished.

- Uniform and predictable
- Resource efficient
- Resists bowing, twisting, and shrinking
- Available in long lengths
- Works for both floors and roofs
- Capacity for large holes

WE STARTED THE REVOLUTION AND WE'RE STILL LEADING IT.

Silent Floor joists are engineered to precise specifications for consistency and dimensional stability. Being lightweight, even long Silent Floor joists are easy to handle and carry. They come with pre-drilled knockout holes in the web for wiring, and our Framer's Pocket Guide (available at www.iLevel.com) provides information on how and where to drill additional holes for HVAC ductwork or plumbing drops.

Deeper Silent Floor joists accommodate holes, allowing large heating supply ducts to be installed in the floor cavity. Plumbing installers also appreciate the way Silent Floor joists easily provide the code-required support for flexible plumbing lines without the need for additional blocking to attach plumbing hangers.

And when you build with Silent Floor joists, you not only get the best product, you also get unsurpassed customer service, design expertise, and engineering support. With iLevel, you can take advantage of industry-leading software and know-how to help you assemble a floor system that's designed to work as a cohesive unit—instead of working piece by piece.

But it all starts with the right piece.

iLEVEL TRUS JOIST SILENT FLOOR JOIST BENEFITS

- **Flat, stable TJI joists reduce callbacks**
- **Easy-to-cut, long lengths provide jobsite flexibility**
- **Lightweight for easier installation**
- **Easily drilled and cut for plumbing and ductwork**
- **Customizable, predictable floor performance with the TJ-Pro™ Rating software tool**
- **Save time and money and increase customer satisfaction**
- **Durable performance is backed by iLevel's limited product warranty**
