

HOLD UP THE HOUSE WITHOUT HOLDING UP THE TRADES.

TRUS JOIST® TIMBERSTRAND® LSL BEAM

You want the best beam for the buck in all your projects, a beam that's straight, strong and solid. But what happens when you need to cut holes in that beam big enough to get your wiring and pipes through, without compromising strength and support?

The TimberStrand® LSL Beam from Trus Joist provides the consistency and performance you've come to expect from TimberStrand® LSL. It also can accommodate larger holes—up to 4 $\frac{5}{8}$ " in a 14" beam—and even multiple holes without any loss of structural performance.

- TimberStrand® LSL starts straight and stays straight
- Is readily available
- Accommodates larger holes
- Allows multiple holes
- Competitively priced for better value

STRUCTURAL CAPACITY MEETS JOBSITE FLEXIBILITY

The TimberStrand® LSL Beam gives you greater flexibility on the jobsite. It is the only beam designed to accommodate large holes for plumbing, wiring, and conduits. By going through the beam instead of inserting multiple joints to go around it, trades can work with straighter runs of pipes and wires. Fewer plumbing elbows not only saves time and materials, but can improve the water flow throughout a home.

Our beam can help eliminate the need to change the framing or add a soffit to a new home. An added soffit can change sight lines and possibly reduce living space by lowering the ceiling height. Trus Joist's TimberStrand® LSL Beam is being introduced at a competitive price, and uses new manufacturing processes and materials to produce more volume faster, so product will be there when you need it.

TRUS JOIST TIMBERSTRAND LSL BEAM BENEFITS

- Durable performance is backed by Trus Joist's limited warranty
- Product is there when you need it
- Flexibility on the jobsite
- Easier installation for plumbing and wiring
- Helps save time and money
